

# Lemurs

**Homeland: Madagascar**

**Scientific name: Lemuridae**

**Food: Fruits and insects**

**Diurnal: Active during the day, sleeps in groups known as troops**

**Nocturnal: Active during night to avoid predators and competition over food.**

**Cathemeral: Sleeping pattern shifts accordingly to seasons and other factors.**

## Fun Facts:

**When ring-tailed lemurs bask in the sun with their arms spread, they look like they are worshipping it**

**Dwarf Lemurs are the only kind of primate that hibernates!**

**Lemurs rely on safe spots to sleep at night, caves, and secret spots on trees are often used**
